

# Not Enough Dust

The most surprising piece of evidence favoring creation that I have encountered happens to be by far one of the most common of our everyday lives - dust. Yes, the "from whence we came, and to which we all shall return," happens to be the very thing that whispers the existence of an all loving God and creator. I first came upon this information when I was researching an on-line school for my son and was talking to my neighbor about the difficulties I was encountering. The conversation turned to science and she asked me if I had read a book called "It Couldn't Have Just Happened" by Lawrence O. Richards. She let me borrow her copy so my kids could read it, and as is a policy with me, I read it first. I couldn't put it down. One of the most intriguing facts that stood out, as I afore mentioned, was dust. To be exact, cosmic dust. Of course I realize cosmic dust is not the dust we were made of, but who knows, however, it turns out that there isn't nearly enough cosmic dust on this planet to account for the millions of years that evolution requires. This, among many other common sense facts in the book, were earth shaking for me. Many questions swam through my thoughts as I read on. Fact after fact amazed me and made me wonder why I had never questioned evolution. Hungry to know more I found a group that discussed new evidences that support creation and a young earth, a term I hadn't heard until then. The discussions were refreshing, and everyone was encouraged to seek out the truth for themselves. From these discussions I was introduced to an annual creation expo in Indianapolis. At this expo some of the leading scientists in the field of science for creation speak. The expo is one of the most interesting and eye-opening events I had attended. The expo lasted six days and they never seemed to run out of amazing material. I thoroughly enjoyed the presentations, the banquet, and being able to meet and ask my questions of the scientists that are amongst the leaders in these topics. Here I felt no one was afraid of truth, a refreshing and welcomed change. My questions were answered, another refreshing change. I would encourage anyone, no matter what your beliefs, to explore the information the Creation Evidence Expo has to offer.
